# 44 pages with everything you need for cost-effective pipe systems

Alvenius FlowMax® is a range of steel pipes, quick couplings and fittings including everything you need to design the market's most cost-effective pipe systems.

Maximum reliability, top-grade safety, resistance to corrosion and aggressive media, long service life and superb life cycle costs (LCC) are key benefits built into all Alvenius FlowMax® systems.

Alvenius offers several systems, depending on the application, dimension and pressure rating requirements.

The Alvenius K10 system is widely used within Mining and Tunnelling for pressures up to 40 bar and in sizes ranging from 48 mm (1½") to 318 mm (12"). Pipes and fittings in the K10 system each have a welded "shoulder".

The Alvenius CG/Victaulic system is often used for permanent installations with sizes up to 323 mm (12"). Standard systems are available for pressures up to 80 bar, while systems for higher pressures can be made to order. Normally, thick-walled rings with a machined groove are used, welded to the ends of the pipes. This is why the system is called cut groove (CG). For low pressures, we also offer a roll groove (RG) system, with a directly groove rolled at the ends of each pipe. The CG/RG system is often referred to as a Victaulic system.

For larger pipe sizes, 355 mm–610 mm (14"-24"), we offer the AGS system. The AGS system is similar to the CG/RG system, but with the difference that the pipes have a greater wall thickness and the groove is further in from the end of the pipe. The AGS system normally has a pressure rating of 25 bar.

## Certifications and norms

Alvenius is certified according to the quality standard ISO 9001, the environmental standard ISO 14001 and the welding quality standard ISO 3834-2.

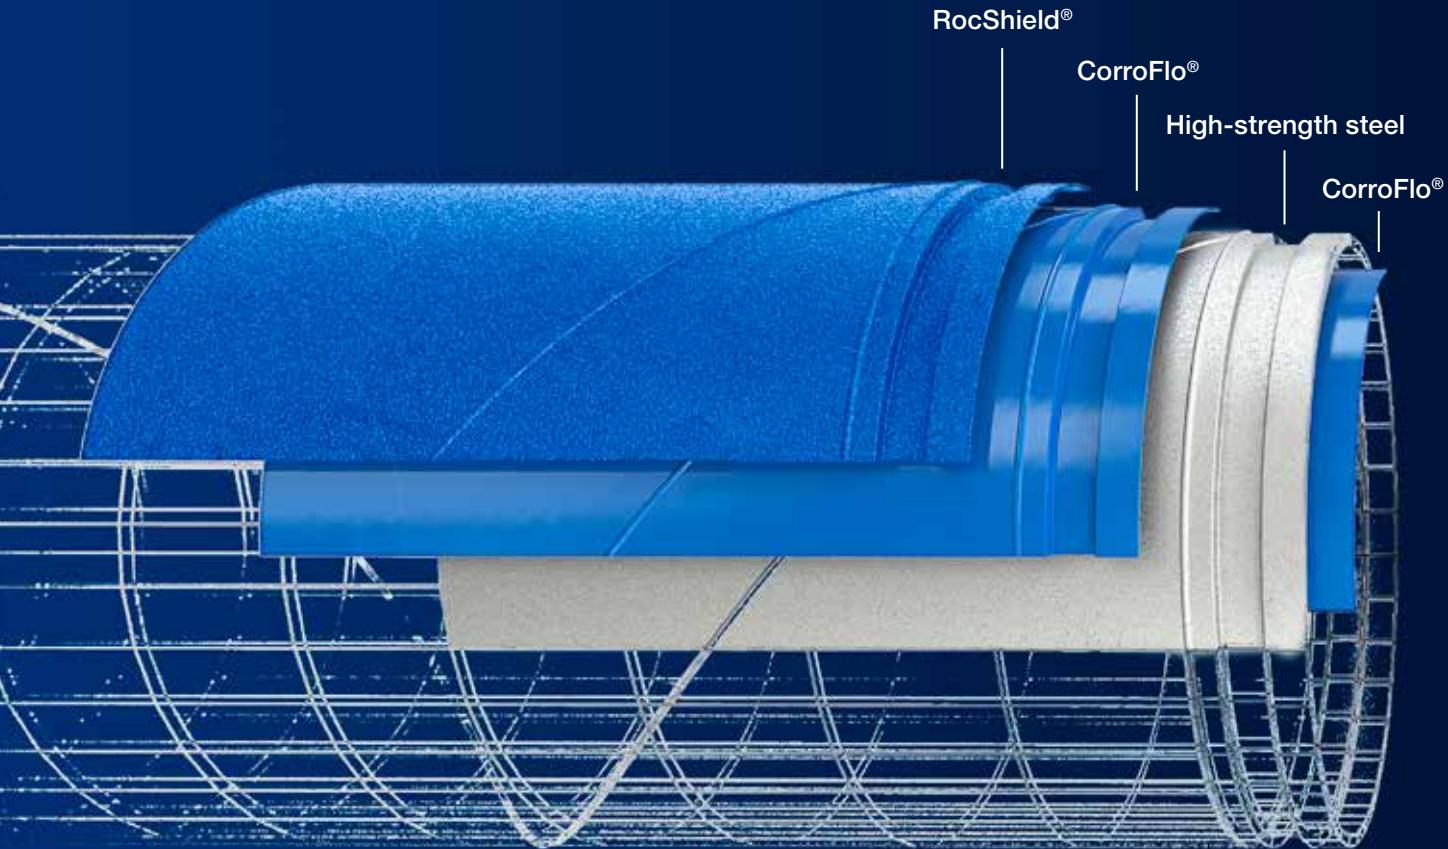

FlowMax® pipes are designed and manufactured according to the pressure equipment directive PED 2014/68/EU and the SS-EN 13480 series. Tolerances according to SS-EN 10217-1.

## More information

This product catalogue covers the entire standard Alvenius range: pipes, couplings, valves, elbows, tees, adapters, threaded outlets and more.

Further information about the company and our products can be found at: [www.alvenius.com](http://www.alvenius.com)

You can download drawings in formats such as CAD here:

## Surface coatings for all conditions and needs

Demanding conditions, aggressive or abrasive media, strict hygiene requirements, the need for a cost-effective pipe system. No problem. Alvenius offers surface coatings to meet all needs and requirements and we guide you to the right solution.

Typical applications for pipe systems from Alvenius include:

- Mining industry and mineral processing
- Tunnelling applications
- Chemical industry
- Municipal water & wastewater
- Pulp and paper industry
- Food industry
- Offshore
- Construction and civil engineering
- District cooling
- Artificial snowmaking
- Fire protection
- Automotive industry

## **HDG**

HDG (Hot-Dip Galvanized) is an ideal surface coating for pipes that may need to be dismantled and reassembled as it provides a highly robust surface layer.

Such pipes are highly resistant to impact, wear and harsh weather conditions. What's more, the zinc layer "heals" if damaged.

## **CorroFlo®**

Alvenius FlowMax® pipes are coated both internally and externally with CorroFlo®. These pipes are ideal for environments and applications where, for example, acidic water and aggressive chemicals are a problem.

Tests show that CorroFlo® meets the requirements for the extremely demanding corrosion class SS-EN ISO 12944, which applies to marine environments (C5-M) and underground (Im3).

Independent tests show that pipes coated with CorroFlo® offer a service life of more than 50 years.

## **RocShield®**

For extra-durable wear and impact protection, the external surface of the pipes can be treated with RocShield® on top of the CorroFlo® coating.

RocShield® is a 500 µm LDPE layer that offers extreme resistance, making it suitable for pipes used in exposed environments.

The surface structure with its good gripping properties also offers easier and safer handling.

### **Internal surface coating advantages**

- Improved life cycle cost – extremely low flow resistance means lower energy consumption and lower overall costs
- Very good resistance to corrosion and chemicals
- Optimal hygiene properties – the smooth coating prevents the build-up of deposits inside the pipes
- Free from Bisphenol A

### **External surface coating advantages**

- Resistance to external impact on the pipes
- Superior service life – proven by independent tests in extreme environments
- Ideal in aggressive environments thanks to the high resistance to acidic and alkaline liquids
- Very good resistance to corrosion
- The surface coating has an elongation at failure of up to 800%
- Flexible and easy to repair if damaged

## Alvenius<sup>®</sup> CG/RG 60–323 mm (2"–12")

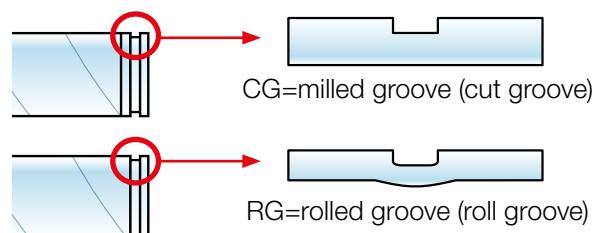

CG/RG quick coupling system to ISO standard, normally for pressures up to 80 bar. Systems for higher pressures can be made to order. This system is also known as a roll groove or Victaulic system.

Alvenius pipes are spiral welded using unique pressure vessel quality steel material. This means that the pipes can be made thin-walled yet strong. The combination of low weight and quick couplings makes a system that is extremely easy to manage and install.

The pipes are available with precision-welded rings at the ends for high pressures and with rolled groove for lower pressures.

### Properties

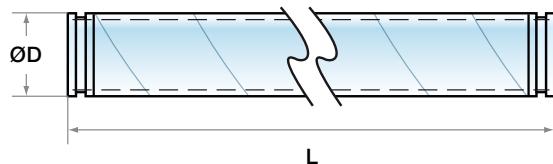

- Sizes 60–323 mm
- Rigid or flexible couplings
- Wide selection of rubber gaskets depending on the application and the type of media to be transported in the pipe
- Self-sealing gasket. Also works in vacuums under certain conditions.
- Deflection up to 2.5°
- Unaffected by vibrations
- Tolerates axial movement, such as due to heat expansion, thanks to axial play in the coupling

## Pipe CG (cut groove)

Our standard pipes are available with different pressure ratings depending on the application. Standard lengths are 6 m, but we also offer shorter pipes of various lengths for easy system adaptation.

For maximum reliability, all pipes are pressure tested with water at 1½ times the rated working pressure before leaving the factory.

## Pipe RG (roll groove)

Alvenius FlowMax® pipes are spiral welded using unique pressure vessel quality steel material.

This means that the pipes can be made thin-walled yet strong while the spiral welding keeps the pipes straight.

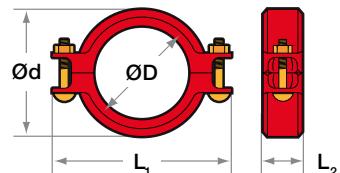

ØD [mm]	t [mm]	L [mm]	PN [bar] above ground	Weight [kg]	Part no. Hot-dip galvanized

## Coupling Flexible, model St 75

Incl. rubber gasket (EPDM).

Flexible coupling for pressures up to PN25. Flexible means that the coupling allows for some deflection and play, such as due to vibrations or temperature fluctuations. Contact Alvenius if you are uncertain as to which type of coupling to use.

## Coupling Flexible, model St 77

Incl. rubber gasket (EPDM).

Robust flexible coupling for pressures up to PN63 depending on size (PN80 for underground systems). Flexible means that the coupling allows for some deflection and play, such as due to vibrations or temperature fluctuations. Contact Alvenius if you are uncertain as to which type of coupling to use.

## Coupling Rigid, model St 07

Incl. rubber gasket (EPDM).

Rigid coupling for pressures up to PN40 depending on size. Rigid means that the coupling is completely rigid and equivalent to a welded joint. Contact Alvenius if you are uncertain as to which type of coupling to use.

## Rubber gasket

EPDM rubber gaskets are included as standard with all couplings. If you need other rubber gaskets or additional spare rubber gaskets, a wide selection of gaskets are available depending on the application and media.

For larger sizes, see the section Alvenius AGS.

## Tee, CG (cut groove)

The standard range includes a wide selection of straight tees, reducer tees and tees with threaded outlets.

Branch pipes, which are tees with a 45° branch, are available.

Tees are supplied with the same surface coating as the rest of the system.

## Elbow, CG (cut groove)

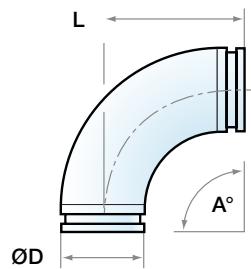

Elbows are used when the deflection offered by the coupling is insufficient.  
Elbows are supplied with the same surface coating as the rest of the system.

## Flanged adapter CG (cut groove)

Alvenius offers flanged connectors to easily connect the system to, for example, other pipe systems and flanged valves.

We can supply all types of DIN and ANSI flanges with different pressure ratings.

The entire flanged connector is supplied with the same surface coating as the rest of the system.

323.9	32	40	80	16.7	122370801	12237080X

For larger sizes, see the section Alvenius AGS.

## Welding ring CG

We offer individual welding rings of all sizes to customise pipe sections.

These welding rings are of the same type as on the pipe ends and can be connected to the rest of the system.

ØD [mm]	t [mm]	L [mm]	PN [bar] above ground	PN [bar] underground	Weight [kg]	Part no. Untreated
60,3	1,8	43	63	63	0,2	120983810

323,9	6,5	48	63	80	3,0	122844850

For larger sizes, see the section Alvenius AGS.

# Valves

To further complement the system, Alvenius offers a wide selection of different types of valves. The choice of valve is determined by multiple factors, such as valve type, application and pressure rating. Below are a number of images illustrating some of our valve range.

Examples of valves connected using a coupling: butterfly valves for lower pressure ratings, check valves, ball valves and knife gate valves.

Examples of valves connected using a flanged connector: butterfly valves for higher pressure ratings, gate valves and air release valves.

Type	Size range	Connection	Pressure rating [bar]
Butterfly valve	60–323 mm (2"–12")	CG coupling	21

Type	Size range	Connection	Pressure rating [bar]
Ball valve	60–168 mm (2"–6")	CG coupling	55

Type	Size range	Connection	Pressure rating [bar]
Butterfly valve	60–323 mm (2"–12")	Flanged connector	40

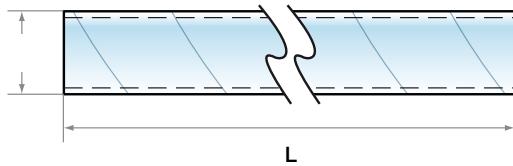

Type	Size range	Connection	Pressure rating [bar]
Knife gate valve	89–323 mm (3"–12")	CG coupling	10

## Plain end pipe

Black (untreated) pipes with plain ends are available for use in, for example, construction, welding, rolling or fitting/adjustment. The pipes have the same thickness and pressure rating as the quick coupling system. In addition to the sizes and pressure ratings in the table, custom sizes and pipe lengths can also be made to order.

Contents: Complete kit: 5 strips x 25 cm, 1 roller, 1 hot air gun

Strips: 5 strips x 25 cm

## Alvenius<sup>®</sup> AGS 355–610 mm (14"–24")

Alvenius AGS is a quick coupling system for larger sizes, 355 mm–610 mm (14"–24"). The system is normally available for pressures up to 25 bar.

Alvenius pipes are spiral welded using unique pressure vessel quality steel material. This means that the pipes can be made thin-walled yet strong. Despite their large size, AGS couplings are comprised of two coupling halves, a rubber gasket and a nuts and bolts – just like the smaller size components. This makes for quick and simple installation even with large diameter pipe systems.

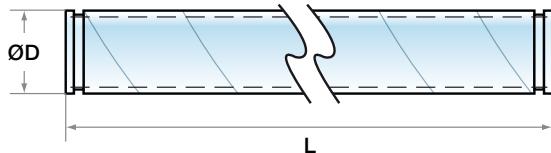

The AGS system can be ordered as hot-dip galvanized and with a CorroFlo<sup>®</sup> coating (size 24"/610 mm not available with CorroFlo<sup>®</sup>).

### Properties

- Sizes Ø355–610 mm
- Rigid or flexible couplings
- Wide selection of rubber gaskets depending on the application and the type of media to be transported in the pipe
- Self-sealing gasket. Also works in vacuums under certain conditions.
- Working temperature -35° to +110°
- Some play in the joints (flexible couplings)
- Unaffected by vibrations
- Absorbs axial movements in the pipe system thanks to axial play in the coupling

## Pipe AGS

Alvenius FlowMax® pipes are spiral welded using unique pressure vessel quality steel material. This means that the pipes can be made thin-walled yet strong while the spiral welding keeps the pipes straight.

## Coupling Flexible, model AGS 77

Incl. rubber gasket (EPDM).

Sturdy flexible coupling for pressures up to PN25 depending on size. Flexible means that the coupling allows for some deflection and play, such as due to vibrations or temperature fluctuations. Contact Alvenius if you are uncertain as to which type of coupling to use.

Product	ØD [mm]	Ød [mm]	L <sub>1</sub> [mm]	L <sub>2</sub> [mm]	Max. deflection °	PN [bar] above ground	PN [bar] under-ground	Weight [kg]	Part no. Painted	Part no. Hot-dip galvanized	Part no. CorroFlo® •

## Coupling Rigid, model AGS 07

Incl. rubber gasket (EPDM).

Rigid coupling for pressures up to PN40 depending on size. Rigid means that the coupling is completely rigid and equivalent to a welded joint. Contact Alvenius if you are uncertain as to which type of coupling to use.

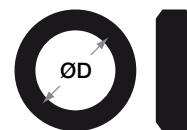

CorroFlo®-coated couplings can only be combined with welded pipe fittings due to the surface coating.

Product	ØD [mm]	Ød [mm]	L <sub>1</sub> [mm]	L <sub>2</sub> [mm]	Max. deflection °	PN [bar] above ground	PN [bar] underground	Weight [kg]	Part no. Painted	Part no. Hot-dip galvanized	Part no. CorroFlo® •

## Rubber gasket

EPDM rubber gaskets are included as standard with all couplings. If you need other rubber gaskets or additional spare rubber gaskets, a wide selection of gaskets are available depending on the application and media.

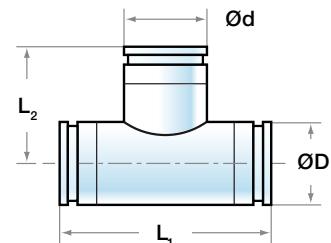

ØD [mm]	Weight [kg]	Part no.

610.0	1.8	4553-00

## Tee, AGS

The standard range includes a wide selection of straight tees, reducer tees and tees with threaded outlets.

Branch pipes, which are tees with a 45° branch, are available.

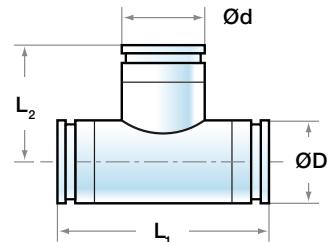

Tees are supplied with the same surface coating as the rest of the system.

## Reducer/Taper, AGS

Reducers are used to connect pipes of different diameters.

The standard range includes a wide selection of reducers for connecting different diameters and reducers with threaded outlets.

## Flanged adapter AGS

Alvenius offers flanged connectors to easily connect the system to, for example, other pipe systems and flanged valves.

We can supply all types of DIN and ANSI flanges with different pressure ratings.

The entire flanged connector is supplied with the same surface coating as the rest of the system.

## Welding ring AGS

We offer individual welding rings of all sizes to customise pipe sections.

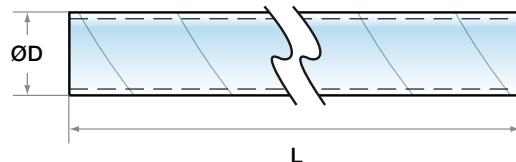

These welding rings are of the same type as on the pipe ends and can be connected to the rest of the system.

Contact Alvenius for more information.

## Plain end pipe

Black (untreated) pipes with plain ends are available for use in, for example, construction, welding, rolling or fitting/adjustment. The pipes have the same thickness and pressure rating as the quick coupling system. In addition to the sizes and pressure ratings in the table, custom sizes and pipe lengths can also be made to order.

## Alvenius<sup>®</sup> K10 48–318 mm (1½"–12")

Alvenius K10 is a quick coupling system with a "shoulder" at each end of the pipe. The system is available in standard metric sizes for pressures up to 40 bar, depending on size. The K10 system is easier to install compared to the CG/RG systems. It offers greater flexibility with deflection up to 4°.

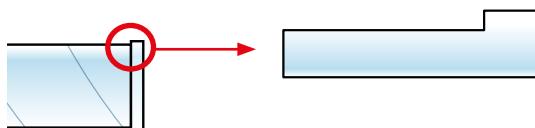

Alvenius pipes are spiral welded using unique pressure vessel quality steel material. This means that the pipes can be made thin-walled yet strong. The low weight/quick coupling combination makes for a system that is extremely easy to manage and install.

Pipes and pipe fittings are supplied hot-dip galvanized as standard. Other surface coatings to order.

K70 is an articulated coupling for even faster and more flexible installation – just one single bolt needs tightening.

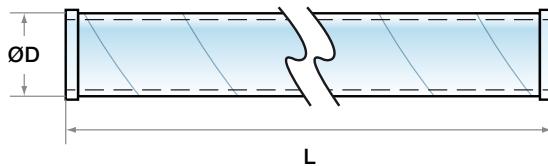

### Properties

- Sizes Ø48–318 mm
- Self-sealing gasket. Also works in vacuums under certain conditions.
- EPDM rubber gasket as standard, which is also resistant to chemicals.
- Working temperature -35° to +110°
- Optional nitrile or silicone gasket for long-term contact with petroleum products.
- Deflection up to 4°
- Unaffected by vibrations
- Absorbs axial movements in the pipe system thanks to axial play in the coupling

# Pipe K10

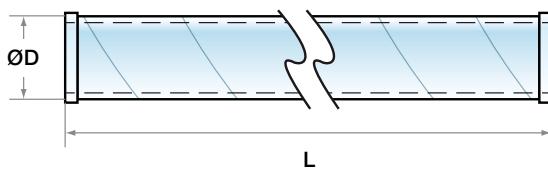

Alvenius FlowMax® pipes are spiral welded using unique pressure vessel quality steel material. This means that the pipes can be made thin-walled yet strong while the spiral welding keeps the pipes straight.

## Coupling K10

Incl. rubber gasket (EPDM).

Flexible coupling for pressures up to 40 bar depending on size. Flexible means that the coupling allows for some deflection and play, such as due to vibrations or temperature fluctuations. Contact Alvenius if you are uncertain as to which type of coupling to use.

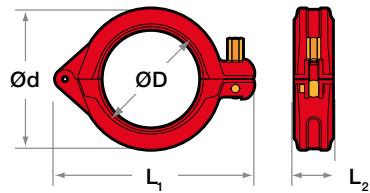

ØD [mm]	Ød [mm]	L <sub>1</sub> [mm]	L <sub>2</sub> [mm]	Max. deflection	PN [bar]	Weight [kg]	Part no. Painted

For larger sizes, see the section Alvenius AGS.

## Coupling K70

Incl. rubber gasket (EPDM).

The K70 is similar to the K10 coupling, but is articulated on one side and as such has only one bolt, used for extra quick connection. Moreover, the bolt is fitted, which means few loose fittings.

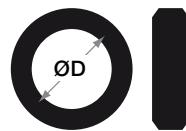

ØD [mm]	Ød [mm]	L <sub>1</sub> [mm]	L <sub>2</sub> [mm]	Max. deflection	PN [bar]	Weight [kg]	Part no. Painted

## Elbow K10

Elbows are used when the deflection offered by the coupling is insufficient.

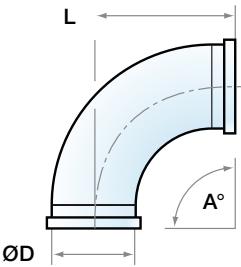

Elbows are supplied with the same surface coating as the rest of the system.

## Reducer/Taper K10

Reducers are used to connect pipes of different diameters.

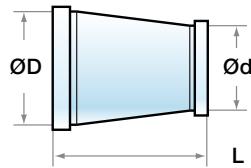

The standard range includes a wide selection of reducers for connecting different diameters and reducers with threaded outlets.

254.0	136	40	8.1	110366101
318.0	160	25	13.2	110367101

For larger sizes, see the section Alvenius AGS.

## Welding ring

We offer individual welding rings of all sizes to customise pipe sections on-site.

These welding rings are of the same type as on the pipe ends and can be connected to the rest of the system.

### **More information**

This product catalogue covers the entire standard Alvenius range: pipes, couplings, valves, elbows, tees, adapters, threaded outlets and more.

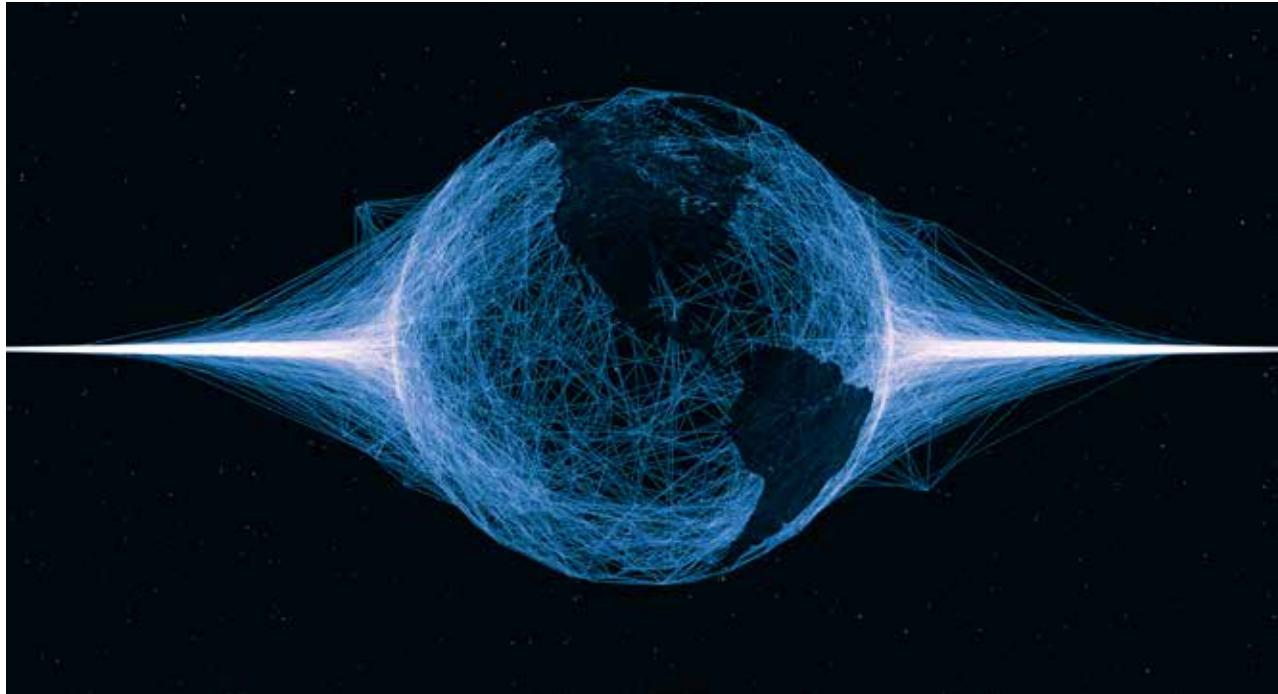

Further information about the company and our products can be found at: [www.alvenius.com](http://www.alvenius.com)

You can download drawings in formats such as CAD here:  
[www.alvenius.solidcomponents.com](http://www.alvenius.solidcomponents.com)

All information in this publication is given in good faith, and believed to be correct at the time of going to press. However, no responsibility can be accepted for any errors, omissions or incorrect assumptions.

Alvenius reserves the right to make alterations without prior notice. Due to continuous product development, changes in technical specifications may change. Installations must comply with the installations instructions.

Alvenius was founded in 1951 and ever since we have focused on supplying the global market with high-quality quick coupling steel pipe systems.

Today, Alvenius focuses its expertise on the segments tunnels, mines, industry, fire protection and extinguishing, water and wastewater systems and artificial snow making.

We have a presence in Asia, Africa, the Middle East, North and South America, Europe and, of course, our domestic market Sweden.

Our international approach offers many advantages.

Above all else, it means that we understand the conditions and demands of your particular market – wherever that may be.
