苏州沃莱特流体控制设备有限公司

SUZHOU WALTER FLOW CONTROL EQUIPMENT CO.,LTD.

综合式阀门解决方案提供商
Integrated Valve Solutions Provider.

Company Profile

Suzhou Walter Flow Control Equipment Co., Ltd was established in 2013, we are focus on flow control and provide stable and reliable qualified valves.

In an increasingly competitive environment, we are faced with comprehensive cost control: less consumption, lower emissions, and increasingly stringent labor requirements, environmental protection and production safety. What our customers need is a more stable and safe operation of the system and more convenient quantitative control. WALTER is a professional valve supplier. It has been able to provide professional products and services from severe pipelines to water systems.

WALTER has always focused on the research and development and production of valves. Valves are the control component of the piping system, long-term stability has always been our goal, providing professional and high-quality engineering solutions for various end users. In the field of flow control, we have been working hard to make it easier to solve and make WALTER as a leader in the field in future.

WATER TREATMENT

IRRIGATION

INDUSTRY

HYDROPOWER

FIRE PROTECTION

Our Advantage

- Outstanding product design, excellent product performance
- Product diversity to meet different working conditions
- Perfect technical solutions and timely communication
- Meet the development requirements of smart water in future

Product Standard :

Design : GB/T12232, BS5163, EN1171 / EN1074
 Flanges : BS EN 1092-2 ASME B16.1
 Face to face : DIN3202-F4/F5, BS EN558-1, ASME B16.1
 Test : BS EN12266-1、API598

Technical Specification:

Size: DN50~DN600 (2" ~ 24")
 Pressure: PN10/16
 Work Temperature: -5°C ~ 85°C
 Seat Test: 1.1 x PN
 Shell Test: 1.5 x PN
 Medium: Clean Water, Sewage

Features:

- integral bonnet design, Fully rubber-coated wedge
- 5 sealing ring to prevent internal leakage
- Full bore design , low head loss and low torque
- FBE coating inside and outside Min 250μ

Material Specification:

Item	Part Name	Material
1	Body	EN GJS 500-7
2	Bonnet	EN GJS 500-7
3	Bonnet Screw	C.S
4	Wedge	DI+EPDM
5	Wedge Nut	Brass
6	Stem	AISI 420
7	Stem Nut	Brass
8	Seal Rings	NBR/EPDM
9	Hand Wheel	DI(Cap is Optional)

 Face to face : DIN3202, BS EN558-1, ISO5752,
 ASME B16.1
 Top Flange: ISO5211
 Test : BS EN12266, API598

Technical Specification:

Size: DN50~DN600 (2" ~ 24")
 Pressure: PN10/16
 Work Temperature: -5°C ~ 85°C
 Seat Test: 1.1 x PN
 Shell Test: 1.5 x PN
 Medium: Clean Water, Sewage

Features:

- Bidirectional seal, easy to operate and install
- Streamlined disc with low head loss
- Vulcanized rubber seat, low torque
- Valve can be install on pipeline directly without extra flanges gasket

Material Specification:

Item	Part Name	Material
1	Body	EN GJS 500-7
2	Disc	DI/SS/Bronze
3	Stem	AISI410/416

Product Standard :

Design : EN 1074-4
 Flanges: BS EN1092-2, ASME B16.1
 Test : BS EN12266

Technical Specification:

Size: DN50~DN300 (2" ~ 12")
 Pressure: PN10/16
 Work Temperature: -5°C ~ 85°C
 Seat Test: 1.1 x PN
 Shell Test: 1.5 x PN
 Medium: Clean Water、 Sewage

Features:

- Double chamber design to ensure running more smoothly
- Avoid water hammer
- ABS high strength ball to ensure long service life
- Large exhaust port can avoid block
- FBE coating inside and outside Min 250μ.

Material Specification:

Item	Part Name	Material
1	Body	EN GJS 500-7
2	Cover	EN GJS 500-7

Product Standard :

Design : EN 12334, EN1074,
 Flanges: BS EN1092-2, ISO 7005
 Face to Face: EN 558-1
 Test : BS En12266

Technical Specification:

Size: DN50~DN600 (2" ~ 14")
 Pressure: PN10/16
 Work Temperature: -5°C ~ 85°C
 Seat Test: 1.1 x PN
 Shell Test: 1.5 x PN
 Medium: Clean Water

Features:

- The most reasonable and streamlined design;
- The MIN. noise while direct flow or backflow;
- Head loss only 0.18bar with velocity of 2 m/s;
- Shut off speed is only 0.2s;
- Integral body and flow guide design, full rubber coated disc;
- FBE coating inside and outside Min 250μ.

Material Specification:

Item	Part Name	Material
1	Body	EN GJS 500-7
2	Disc	DI+EPDM

Product Standard :

Design : EN 12334, EN1074,
 Flanges: BS EN1092-2, ISO 7005
 Face to Face: EN 558-1
 Test : BS EN12266

Technical Specification:

Size: DN50~DN600 (2" ~12")
 Pressure: PN10/16
 Work Temperature: -5°C ~ 85°C
 Seat Test: 1.1 x PN
 Shell Test: 1.5 x PN
 Medium: Clean Water, Sewage

Features:

- Reasonable design, can effectively avoid turbulence
- Easy to install, maintenance and replacement FBE coating inside and outside Min 250μ.
- It's widely use in pumping stations and networks for clean water distribution, irrigation and water treatment

Material Specification:

Item	Part Name	Material
1	Body	EN GJS 500-7
2	Base	EN GJS 500-7
3	Spring	AISI 304
4	Stem	AISI 304
5	Disc	DI+EPDM
6	Bolt	AISI 304
7	Sceen	AISI 304

Professional Hydraulic Control Valves Manufacturer

Product Standard

Design : GB/T10674, EN1074-5
 Flanges: EN1092-2, ISO7005-2, ANSI
 Face to Face: GB/T1221, BS EN558-1
 Test : BS EN12266 , API 598

Features:

- Full bore and streamline design,
- lowest head loss when valve fully open.
- High sensitive and strength fabric reinforced diaphragm,
- 1.000,000.00 times test between fully close to open with pressure
- 5 times of working pressure destructive testHigh standard production testSeal
- Seal Test: 1.1 x PN + 1 Bar
- Shell Test: 1.5 x PN + 1 Bar
- Pressure Deviation: ± 0.3 bar
- FBE coating inside and outside Min 250 μ .

Material Specification:

Float Control Valve F8010

• Working Principle

Float Control Valve is used to maintain a pre-set point water level. The float pilot will shut off when water level rises to high level, and open when water level drops. The float ball can be mounted separately in the water tank or with the main valve.

• Features

Reasonable design, stable performance, long service life; Easy to replace and available on-line maintenance; The needle valve can adjust the opening and closing speed of the main valve.

• Application Area

Water tanks for industrial plant and residential buildings

Pressure Reducing Valve F8020

• Working Principle

Pressure Reducing Valve is an accurate and pilot controlled valve. It can reduce a high inlet water pressure to a steady low downstream pressure regardless of the inlet water pressure changing.

• Features

Reasonable design, stable performance, long service life; Rapid response, precision and reliability; Easy to replace and available on-line maintenance; Pilot valve setting the pre-set pressure.

• Application Area

Urban water supply and industrial, agricultural water transmission lines, etc.

Slow Check Valve F8030

• Working Principle

Slow Check Valve is a hydraulic operated Non-slam check valve, Valve opens when inlet pressure over outlet pressure, Valve close tightly when water hammer appears downstream. The velocity of open and close can be controlled by the ball valve which on the outlet control tube line.

• Features

Reasonable design, stable performance, long services life;
Rapid response, precision and reliability
Easy to replacement and available on-line maintenance;
Large flow, small head loss, and can prevent water hammer.

• Application Area

Urban water supply and industrial, agricultural water transmission lines, etc.

Pressure Relief/Sustaining Valve F8050

• Working Principle

Pressure Relief/Sustaining Valve is a hydraulic operated and controlled by pilot valve. To maintain the constant upstream pressure. When inlet pressure exceed pre-set pressure, the pilot valve open and main valve opens according. When main valve relief to the pre-set pressure, pilot valve close and main valve close according.

• Features

Reasonable design, stable performance, long services life;
Rapid response, precision and reliability
Easy to replacement and available on-line maintenance;

• Application Area

Urban water supply and industrial, agricultural water transmission lines, etc.

Flow Control Valve F8040

• Working Principle

Flow Control Valve is a hydraulically operated and pilot control valve to maintain a constant flow regardless of the pressure changes in pipeline system. The pilot valve control and response to the differential pressure produced across an orifice plate which is installed downstream of the valve. And there are several orifice plates with different hole sizes for each size.

• Features

Reasonable design, stable performance, long service life; Rapid response, precision and reliability, easy to operate; The economical pilot valve is optional if considered of price.

• Application Area

Urban water supply and industrial, agricultural water transmission lines, etc.

Solenoid Control Valve F8060

• Working Principle

Solenoid Control Valve is an on-off control valve that either opens or closes upon receiving an electrical signal to the solenoid pilot control. This valve consists of a main valve and a 2-way solenoid valve that alternately applies pressure to or relieves pressure from the diaphragm chamber of the main valve. It's normally open or normally closed type.

• Features

Reasonable design, stable performance, long service life; Rapid response, precision and reliability, easy to operate; The economical pilot valve is optional if considered of price.

• Application Area

Urban water supply and industrial, agricultural water transmission lines, etc.

Surge Anticipating Valve F8055

• Working Principle

Surge Anticipating Valve is use for protect pumps and all applicable pipelines from dangerous pressure surges caused by rapid flow velocity changes. When power failure, the pump stopping can cause dangerous wave which could result in serious equipment damage. The down wave caused by pump stop, followed by an up pressure wave, surge valve open to diverting the high pressure wave and dissipate it. then valve close slowly without any further surge.

• Features

Reasonable design, stable performance, long services life;
Rapid response, precision and reliability
Large flow, small head loss, and can prevent water hammer.

• Application Area

Urban water supply and industrial, agricultural water transmission lines, etc.

Altitude Control Valve F8015

• Working Principle

Altitude Control Valve is hydraulically operated and pilot controlled the high water level in reservoirs without floats ball. The valve keeping fully open until the shut off water level is reached. The pilot operates on the differential in forces between a spring load and water level. the desired high water level is set by adjusting the spring force.

• Features

Reasonable design, stable performance, long services life;
Rapid response, precision and reliability, easy to operated;
The Pilot control the water level deviation within 0.5 meter.

• Application Area

Urban water supply and industrial, agricultural water transmission lines, etc.
